

Lingo for PowerPoint

Introduction

Changing the spellcheck language has long been a problem in PowerPoint. While it's simple to change the language for specific text in a presentation if you receive a presentation created with a different language and need to change it for **ALL** text then it's a real problem and will take hours.

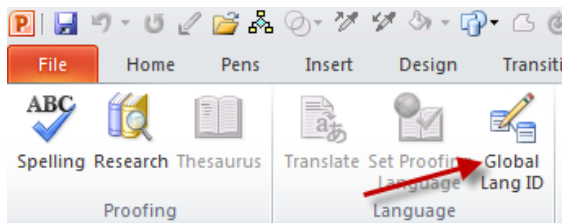

Lingo does it all in seconds! Lingo searches your presentation including the masters, tables, grouped text etc. and changes it all

Requires a Windows PC with PowerPoint 2007 – 2016 installed.

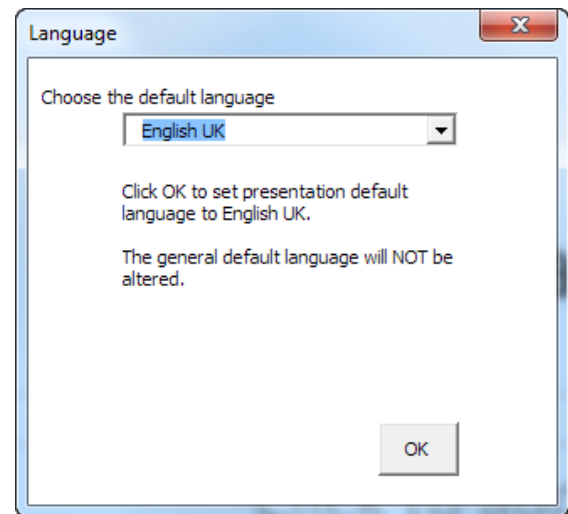

Installation

With PowerPoint CLOSED run the install file Lingo9.msi. The Add In will install and register itself and when PowerPoint is opened you will see a new entry in the ribbon (Review Tab).

Examples:

2010

Save the presentation with a new name.

Use

Simply open the presentation that requires the language to be changed and click "Global Lang ID" on the ribbon (Review Tab).

Use the dialog that opens to select the language required. The Demo will work fully for 10 uses.
