

Picture Effects

To install simply run the msi file from this zip file. PowerPoint should be closed. It will only work with versions 2016 onwards on a PC. Macs are not supported.

When you open PowerPoint there should be a new tab Picture Effects (Multi)

The New menu allows you to add effects to multiple pictures at once OR if you hold down CTRL to ALL pictures on selected slides. This is very useful for setting all pictures back to no effects. Note that adding effects to a large number of slides may take a little while.

This is a totally free product and comes without support or warranty but we are interested in any bugs found.
